

Bunker 9G to remain untouched

9F to be softened on the back and green edge to make more playable and maintainable

9A has the most severe slopes and therefore the sand floor should be moved away from the green edge and enlarged giving more room to create a softer and more playable face.

New bunker to be formed in place of 9B and 9C as shown with less severe slope to the green edge

9D to be removed and 9E to be moved slightly to the left to open a route to the green
